

Daily revenue for GolfX Singapore was volatile but broadly stable over the last 30 days, with individual days ranging from about 2.8k to 14.1k between 2026-04-05 and 2026-05-03, and no data yet for 2026-05-04 and 2026-05-05.

Supporting findings

- From 2026-04-05 to 2026-04-24, daily revenue fluctuated between roughly 2.8k and 14.1k, with examples including 13,022.77 on 2026-04-05, a low of 2,813.29 on 2026-04-16, and a high of 14,058.83 on 2026-04-22, indicating a choppy but generally stable revenue pattern rather than a clear upward or downward trend.

- The daily series is complete from 2026-04-05 through 2026-05-03, providing 29 consecutive days of observed revenue that form a continuous trend line for operational monitoring.
- The requested window extends to 2026-05-05, but the underlying data currently stops at 2026-05-03, so 2026-05-04 and 2026-05-05 appear in the timeline with no revenue values and should not be interpreted as zero sales days.

Recommendations

- Use this daily revenue line as your short-term performance view and set alert thresholds (for example, flag any day below 3k or above 14k) to quickly spot outliers that may indicate operational issues or successful campaigns.
- Overlay key events (promotions, holidays, weather, or operational changes) on this daily chart to explain spikes such as the 14,058.83 day on 2026-04-22 and lows around 2.8k, and replicate drivers of strong days.
- Refresh this view daily as new data for 2026-05-04 onward becomes available, and add a 7-day moving average to smooth volatility and make it easier to see whether revenue is trending up or down week over week.

Caveats

- Interpreted "last 30 days" as 2026-04-05 to 2026-05-05 (2026-04-05 to 2026-05-05), based on anchor=today, reference_date=2026-05-05.
- The source does not carry explicit geography or venue identifiers, so this analysis assumes the data represents GolfX Singapore only.
- The exact daily figures from 2026-04-25 through 2026-05-03 are available in the underlying data but not all are listed here; conclusions are based on the overall pattern rather than each individual day.
